Before 1939, a youth movements article would have been mainly about movements led by adults and aimed at young people – Boy Scouts, Girl Guides, the Boys Brigade, and the numerous sport and recreation clubs that had young people as a main if not the sole target group (see Evans, 1965). By 1939, over 1000 colleges in North America were training leaders for movements such as these (Pangburn, 1940). These movements were adjuncts to the school systems that had been created in urbanized industrial societies. The main targets were 'adolescents' who were experiencing a life stage said to be characterized by inner stress and turmoil (Hall, 1904). Young people were considered 'at risk' when beyond the control and protection of families and schools, that is, during after-school hours and holidays, and also between leaving school and settling in adult occupations and marriages. These youth movements are still very much alive, but they have been joined and overshadowed by movements created and led by young people themselves. To avoid confusion, the older movements would now be better described as 'youth services.'

Social movements differ from organizations and associations. Movements are relatively amorphous: they arise in different places more or less simultaneously. There are no official leaders, although spokespersons may be recognized, and links between groups may be formed. Social movements are products of 'society,' formed 'bottom-up' rather than 'top-down' at the behest of governments. 'Youth' has to be defined as a relationship (with elders), and since the midtwentieth century, 'youth movements' have been those in which substantial numbers of participants have seen themselves, and have been regarded by others, as an upcoming, usurping generation.

In Europe, teenagers began to be aware of themselves as a distinct age group from the 1870s onward (Savage, 2007), and youth cultures (using that term) have been formed since the 1920s (Fowler, 2008). These are not youth movements, but they can become the seedbed for movements with broad social and political objectives. Such movements can be, but will not necessarily be formed in any place where the age group congregates: armed forces and universities have been common breeding grounds. The original *Young Turks* were a prototype. They were young army officers who led a rebellion against the Ottoman monarchy in 1908 and ruled Turkey until the end of the First World War. Subsequently all groups of young upstarts have been likely to be labeled 'Young Turks.' In the 1920s and the 1930s, young people were mobilized in Europe's then ascendant communist and fascist movements. Reflecting on this experience, Karl Mannheim (1952) argued that periods of major historical change were likely to see the birth of new political generations who were unable to relate to the policies and worldviews of existing political elites. Since then, the formation of successive youth movements has been studied more systematically, starting with the student movements of the 1960s up to, so far, the Arab Spring and the Occupy movements that erupted in 2011.

Findings

Student Movements in the 1960s

The student movements of the 1960s and the 1970s have been models for future young and older observers of young people in the West. They have structured expectations about the likely features of successor movements, and in doing so have tended to mislead. The student movements of the 1960s and the 1970s had origins in the civil rights protests that began in the United States in the 1950s and the peace (anti-H bomb) marches and demonstrations in Europe. During the 1960s, the protests spread across both continents, and more thinly in other parts of the world, focusing on opposition to American involvement in the Vietnam War, but the movements adopted a wider range of new issues – second wave feminism, environmentalism, and global justice. All these were embraced within a call for greater personal freedom. The young protesters were unimpressed by the futures that were laid out before them: careers in dull bureaucracies and family lives in 'little boxes.' Political messages were blended with anthems from the Rolling

Stones, Bob Dylan, Joan Baez, hippie dress, the recreational use of drugs, and the sexual liberation that accompanied the marketing of the contraceptive pill from 1961. In Paris, in 1968, student protests drew in trade unions and the French government felt threatened (very briefly). This wave of protests was the work of what Ronald Inglehart (1977) called the postscarcity generation. The postwar baby boomers were the first young people to grow up with no experience of even the threats of poverty and unemployment. Jobs and rising standards of living were taken for granted, and as the generation grew to political maturity and became majorities of voters and politicians, 'quality of life' issues were pushed up political agendas (Reich, 1972; Roszak, 1970). Only minorities of students were involved in any protests during the 1960s and the 1970s (Blackstone et al., 1970) but there are senses in which the activists spoke for their entire generation. As they grew older, many aspects of the counterculture of the 1960s became mainstream.

Social science learned a great deal from studies of this particular generation. Their biographies confirmed Karl Mannheim's proposition that political events experienced during youth, when a cohort is first becoming politically aware, make a profound and lasting impression (Schuman and Corning, 2000). Afterward individuals know whose and which sides they are on and can respond to new issues accordingly. However, we have also learned that basic political orientations can remain fluid well beyond the normal student years (Burnett, 2000). Also, we now know that youthful ideals may be retained but are not necessarily acted on throughout adulthood. Many who rejected materialism in the 1960s built lucrative careers in business, management, and the professions (Fendrich, 1977), and this generation became the adult voters and politicians who ushered in the neoliberal era. Those who pursued careers in politics often made U-turns in response to opportunities and circumstances encountered later on. These were comparable turnarounds to those of the young fascists and communists of the 1930s who helped to build the post-1945 social democracies in Western Europe.

Anticolonial and Neocolonial Movements

The student protesters and hippies of the 1960s may be the West's favored model, but in what were then becoming known as third world, developing or underdeveloped societies, youth movements intent on changing these countries were simultaneously being formed in locations other than city streets and university campuses, and in some cases were seizing power. These movements sought independence, first from colonial powers, then afterward from 'neocolonial' elites to whom power was passed without much else changing. The young activists were often young army officers. They included Gamal Abdel Nasser (1918–70) who was among the young Egyptian army officers who overthrew King Farouk in 1952, Muammar Gaddafi (1942–2011) who was also part of a group of young army officers when they overthrew Libya's King Idris in 1969, and Saddam Hussein (1937–2006) who was part of the group that seized power in Iraq in the 1968 rebellion. Armies as well as universities can nurture new political generations. The original *Young Turks* were from Ottoman Turkey's army.

In other colonies and excolonies, in the decades during and following the Second World War, new generations were formed in political parties that eventually propelled their leaders into power. Examples include a young Robert Mugabe (1924–till date) who became Secretary-General of the Zimbabwe African National Union in the 1960s (in what was then Southern Rhodesia) and was elected to office in the first elections held under universal adult suffrage in 1980. Nelson Mandela (1918–2013) became a founder member of the African National Congress Youth League in 1944, and after 27 years in prison, became the first elected president of postapartheid South Africa in 1994. This particular new political generation, formed when the activists were all young, had to wait a long time before achieving political power.

In the twenty-first century, some countries' leaders waged war against others who would have been regarded as kindred radical spirits in the 1960s. Each side would no doubt argue that the other had changed beyond recognition since then.

Revolutions in Eastern Europe

Two political generations triumphed in 1989. For several years before then, young people who were living under communism had been able to signal support for change by playing Western popular music and wearing Western fashions (Pilkington, 1994). In 1989, they demonstrated on the streets of Poland, the German Democratic Republic, and Czechoslovakia. They celebrated the outcome of the June 4 election in Poland, then iconically on November 9 when the Berlin Wall was opened (by the East German authorities). However, these revolutions were really due to the efforts of an older political generation whose formative political experiences were during and around the time of the Prague Spring in 1968 when attempted reforms in Czechoslovakia were crushed by Soviet tanks. Dissent went underground but was not extinguished, and in 1980, a free trade union called *Solidarity* was formed in Poland, which refused to disband or even go underground despite the imposition of martial law and the imprisonment of its leaders. A key event was the appointment of Mikhail Gorbachev as head of the Soviet regime in 1985. He had once been another young person who had recognized imperfections and been frustrated by the Soviet version of communism. He wanted to reform the system, and his key policies were *glasnost* (freedom of expression) and *perestroika* (reform). He informed communist rulers in East-Central Europe that the Soviet army would not intervene should they lose the support of their people. This warning was intended to reinvigorate the communist systems. In the event, Gorbachev's measures did not reform communism but led to its collapse. Poland's rulers were obliged to hold round table talks with *Solidarity* and agree to free elections. The outcome on June 4 (the true history-making date in 1989) surprised everyone. *Solidarity* won all but one of the seats that were up for election. *Solidarity* was surprised. Poland's communists were devastated and faded into the background before reorganizing themselves as social democrats the following autumn. By then, Poland had a postcommunist government. The possibility of change had been demonstrated. Hungary accelerated its liberalization program and opened its border with Austria. This led to the Trabant exodus. East Germans motored through Czechoslovakia into Hungary, then

through Austria and into West Germany. During September, crowds began marching in Leipzig and other East German cities. During the autumn, crowds assembled and remained in Prague's Wenceslas Square. On December 25, the Ceausescus were summarily executed in Bucharest and communism had ended throughout East-Central and Southeast Europe except in Bulgaria (which held its first free election in June 1990) and Yugoslavia where change was more protracted (see Roberts, 2012a). None of the former communist countries' new leaders were from the youth who had taken to the streets in 1989. *Solidarity*'s main spokesperson and the country's first postcommunist present was a middle-aged electrician, Lech Walesa (1943–). In Czechoslovakia, the spokesperson for *Civic Forum* and the first elected president was an aging playwright, Vaclav Havel (1936–2011).

There was no immediate blossoming of civil societies in Eastern Europe in the early 1990s. The young people who had taken to the streets and squares returned to their homes, schools, and jobs (or unemployment). They did not know it, but in this respect their behavior would prove prototypical for a new pattern of youth political engagement, and they had demonstrated to themselves and to others that change was possible. In the countries that eventually became European Union members, it was possible for the new generation to be elected into office, but this was not the case in most of the new independent states that were created when the Soviet Union was dissolved in 1991. In most of these countries, the communist rulers simply rebranded themselves as nationalists and democrats. New recruits into the political elite in Dneipropetrovsk (a major city in Ukraine) tended to be from the Komsomol (the communist party youth organization) rather than rock 'n roll (Zhuk, 2010). However, the events of 1989 had demonstrated to young people elsewhere that change was possible. Young people in Belgrade stormed the parliament building in 2000 and hastened the fall of President Milosevic. Then came the 'color revolutions': the Rose Revolution in Georgia in 2003, the Orange Revolution in Ukraine in 2004–05, and the Tulip Revolution in Kyrgyzstan in 2005 (see Beachain and Polese, 2010; Collin, 2007). Once again, immediately after these apparently seismic events, the crowds of young people quit the streets and melted away. With hindsight, it became clear that their achievements were better described as regime change rather than true revolutions.

Resisting Neoliberalism

A series of new generations has been announced since the student movements of the 1960s and the 1970s subsided: Generation Y, the ecstasy generation, the Internet generation, and so on. These have not been true generations in which youth have mobilized in movements to change their societies. They have merely headlined new features of the youth life stage. The first true successor generation to the student movements is still in formation and it is being formed in opposition to the neoliberal policies that have spread globally since the 1980s, promoted and enforced by transnational organizations, mainly the International Monetary Fund (IMF), the World Bank (WB), the World Trade Organization (WTO), and the European Union (EU). The core neoliberal policies are free markets and free movement of goods and capital (but not people), and the removal of state subsidies and protection from extractive and manufacturing industries and even public utilities and services, which are thereby exposed to competition from local and international profit-seeking companies.

Anti-Globalisation was the first mass resistance movement. Its first major demonstration was at an IMF/WB meeting in Berlin in 1988. This was followed by a mass protest at a 1989 Paris meeting of the G7 (heads of government in the world's seven largest economies), and an IMF/WB meeting in Madrid in 1994. However, the truly mammoth *Anti-Globalisation* demonstrations were at a meeting of the WTO in Seattle in 1999, and then at a G8 meeting in Genoa in 2001. These were the first mass mobilizations in which new technologies (mobile phone, e-mail, and Internet Web sites) were noted as playing significant roles. All authorities found these events difficult to police since there were no leaders to negotiate with or to arrest. We should note that *Anti-Globalisation* did not mobilize global youth. When the movement was at its height, youth in Eastern Europe were supporting their governments' efforts to attract direct foreign investment.

The *Generation of €1000* did not become a youth movement, but it spread awareness across Europe that young people's salaries were declining in real terms (when they could obtain jobs), and that the generation was at risk of being unable to live as well as its parents. These fears are proving well founded (Roberts, 2012b). *Generation €1000* was the title of an Italian book by Antonio Incorvio and Alessandro Rimassa that was published on the Internet in 2005 and instantly 'went viral.' The book subsequently became a film. In 2005, €1000 per month was the typical starting pay being offered to university graduates across Southern Europe and sometimes in Northern European countries as well. The change since 2008, the year of the banking crisis, has been a further depression of youth salaries. These dipped to under €500 in Greece in 2011.

During 2011, thousands of young Greeks joined a series of demonstrations in Athens against the austerity policies that were being imposed by 'the troika' (the IMF, the European Central Bank, and the European Commission), but these were not specifically youth mobilizations. Then in 2011, Spain became the second EU member state (Greece had been the first) in which youth unemployment rose above 50%. In Spain, this austerity sparked the *Indignados* demonstrations that spread throughout the country and into Portugal (Castells, 2012). Research among Spain's *Indignados* suggested that they were developing new ways of practicing politics. They were not interested in joining or forming political parties or even voting in elections. Some claimed that 'the process is the product,' meaning that the demonstrations were ends in themselves. Their preferred ways of 'participating' were via interactive Web sites and at mass meetings, which worked toward a consensus. Some were also involved in pioneering alternative economic practices (Conill et al., 2012). It was the same in the *Occupy* movement that erupted when the *Indignados* demonstrations were fizzling out in the autumn of 2011. The first *Occupy* event was *Occupy Wall Street* whose 'camp' in Zuccotti Park commenced on 17 September 2011. By the end of October, there were *Occupy* demonstrations in 95 cities in 82 countries, and in over 600 communities across the United States. The *Occupy* slogan was 'We are the 99%.' By the end of 2011, this series of events was drawing to a close. Research among

Indignados and *Occupy* demonstrators, and also among participants in the *Arab Spring* (Honwana, 2013, and see below), produced similar findings as regards the motivations and behavior of young protesters. Low turnout at elections and miniscule political party membership figures should not be read as signs of young people's political apathy. Rather, as in Eastern Europe in 1989 and as context for the subsequent 'color revolutions,' indignation and outrage can be there all the time before suddenly erupting in short-lived outbursts of protest (Benedicto, 2008).

The Arab Spring

This is the name given to a series of mass protests that began at the start of 2011. Young people were very high profile, more so than in any of the instances discussed above except the student movements of the 1960s and the 1970s. This was due to the demography of cities in the 'global south' (Hansen, 2008). The countries have young populations, and their young people have been moving into cities despite facing chronic shortages of housing and employment.

The spark that ignited the *Arab Spring* was struck on 17 December 2010 in Sidi Bouzid, a small town in Tunisia, when a 26-year-old street vendor, Mohamed Bouazizi, set fire to himself when instructed to cease trading because he did not have a license. He died on 4 January 2011, and this sparked 29 days of sustained protest, beginning in Tunis, the capital city, and ended only when President Ben Ali fled (Honwana, 2013). By then, protests had started in Jordan (January 14) and Oman (January 17), followed by a 'Day of Rage' called for January 25 in Cairo's Tahrir Square, which became the site of a sustained protest that ended only when President Mubarak stepped down on February 11 (Osman, 2013). Protests began in Yemen on January 27, in Bahrain on February 14, in Benghazi (Libya) over the death of a human rights lawyer on February 15 (Vanderwalle, 2012), in Morocco on February 20, and in Syria on March 15. There were shorter lived outbursts in some other countries.

The role of the new media in the rapid spread of these protests is disputed. *Facebook* and *Twitter* are said to have been crucial in drawing the initial crowds, *YouTube* could spread anger by posting images of police brutality, often recorded on mobile phones (Shahine, 2011). However, at the beginning of 2011, only around a quarter of Egypt's population was using the Internet and less than 6% used *Facebook* (Noueihed and Warren, 2013). *Al Jazeera*, the television channel, was probably crucial in creating a transnational public sphere and in amplifying messages with new media origins. It is noteworthy that wherever the protests led to elections, the 'Twitterati' were likely to be shocked to discover that they were nowhere near 50% let alone 99%.

The outcomes of these protests differed from country to country. Protests were quickly suppressed or ended with minor concessions in Bahrain, Jordan, Oman, and Morocco. There were changes of government in Tunisia, Egypt, and Yemen, and in Libya after intervention by North Atlantic Treaty Organization forces, the death of Gaddafi on 20 October 2011, and the election of a General National Congress in July 2012. In Syria, the protests in Damascus during March 2011 led to a prolonged civil war. In Egypt, elections in December 2011/January 2012 made the Moslem Brotherhood the largest group in the new parliament, and the presidential election in July 2012 produced a Moslem Brotherhood winner, Mohamed Morsi. The parliament was dissolved by Egypt's judiciary, and in July 2013, President Morsi was deposed in an army coup, which was followed by the arrest of Moslem Brotherhood leaders and the shooting of hundreds of Moslem Brotherhood street protesters. Tahrir Square was the site of further demonstrations, supporting and celebrating the army's latest actions.

Assessment, Prospects, Future Directions

There are several conclusions that can be drawn from a survey of youth movements since the 1950s.

- These movements are most successful in mobilizing dissent, anger, despair, and outrage, while they have no clear aims or leaders. This has applied in all the movements reviewed above.
- Incumbent regimes can face down prolonged and massive youth protests for as long as they retain the support of their armed forces. Eventually the crowds of protesters dwindle. Presidents and monarchs are toppled only when their security melts away, as happened in Eastern Europe in 1989, in all the 'color revolutions,' and in Tunisia and Egypt during the Arab Spring.
- Elections are disastrous for youth protest movements. Once parties are formed, leaders elected, and policies declared, protesters tend to fragment, while others return to 'the party of the couch.' On election day, another faction of the 'couch party' is likely to emerge, and then protesters find that they do not represent 'all' or even 'most' of their people.
- The new media may be able to accelerate the spread of protests, but revolutions of 1989 happened with underground printed media.
- Up to now there have been no global youth movements. This is despite necessary preconditions having arisen – the Internet which can host 'virtual' global communities, and the instant global transmission of sound and images so that, for example, 9/11 is now etched into the memories of people in countries all over the world (Edmunds and Turner, 2005). It is also despite the scale of present-day youth migration, some permanent, but in other cases by young people who intend to return home after completing courses or after earning and saving money, which means that local youth scenes and cultures are often cosmopolitan (Beck and Beck-Gernsheim, 2009). The revolutions in 1989, the 'color revolutions,' the *Indignados*, *Occupy*, and the *Arab Spring* have all been concentrated within if not confined to specific groups of countries.

Many governing regimes have held onto power throughout long periods and have seen off the formation of successive political generations and associated youth movements. The Alouite monarchy has ruled Morocco since 1666, although with far less power today than in 1666. Russia's political elite has held power since the time of Lenin. Splits and power transfers have been within the elite. There have been no revolutions from below, and President Putin's young supporters vastly outnumber the more visible opposition, which tends to

be concentrated in major cities and comprises mainly highly educated young people from intelligentsia families (Dafflon, 2009; Lyytikainen, 2013). There are Central Asian countries whose communist leaders in Soviet times became their independent countries' first presidents and still hold office (Kazakhstan, Tajikistan, Uzbekistan). Modern dynasties are being created. Heydar Aliyev became president of Azerbaijan in 1993 (he was formerly part of the communist elite) and was succeeded by son Ilham in 2003. Hafez al-Assad became president of Syria in 1971 and was followed by son Bashar in 2000.

Older-type adult-led youth services still flourish. Major political parties have youth sections. Many governments run schemes that recruit young people for voluntary service at home and abroad. The European Union has projects that draw the continent's youth together in citizenship-building projects (Kovacheva, 2000; Loncle et al., 2012). A lesson is that adaptation and evolutionary change have been and remain alternatives to revolutions, and both can be products of movements formed and led either by adults or by young people.

Youth, Music, and Peace Building

Mwenda Ntarangwi, Calvin College, Grand Rapids, MI, USA

© 2015 Elsevier Ltd. All rights reserved.

Abstract

This article explores the ways through which youth mobilize music to advance peace in their communities, specifically emphasizing that music is not only used to bring people together for social harmony and reconciliation but also for protest and resistance in order to create a 'culture of peace.' It further seeks to establish the impetus that propels youth into persistent participation in peace building especially through an analysis of the interrelatedness of concepts of peace building and culture of peace as they interact with youth identity. Using examples of the role played by new media in shaping such identity, the article illuminates the power of music in building some kind of virtual coalition that promotes peace. As an expressive medium that often defies physical and cultural barriers, music provides both a platform for advancing peace and an analytical tool through which to understand sociocultural dynamics within which peace building can occur.

Introduction

The twenty-first century has brought with it a world where violence has become banal; where armed political conflict has become the most common mode of solving disputes; where unequal access to resources has subdivided the world into new fiefdoms based on ethnic and racial identity, religion, gender, age, and social class; and where economic competition and exploitation have led to both marginalization and privilege. But it has also brought greater access to information and information sharing; a wider awareness of social, political, and economic realities of people in faraway locations; sensitivity to indigenous rights; and a growing participation of youth in public life. These features of the century allow for a more complex analysis of lived experiences of people around the world, sometimes in real time, as well as projecting what life ought to be by using multiple forms of representation including through music.

Advanced technological processes witnessed in the last few decades have allowed youth to use music and other forms of media to express their lived realities and their aspirations of what their lives should entail. Peace building is one such phenomenon but it is shrouded in a number of extensions of meanings that cannot be overlooked. What is 'peace' and 'peace building,' and how do both concepts get mobilized by youth through music?

Harmonizing Definitions

Peace

Scholars have grappled with the meaning of peace, often seeking to provide a comprehensive definition to a concept that is ever elusive and complex. Definitions range from 'negative peace,' seen as 'absence of violence' and 'positive peace,' considered to be the 'integration of human society,' (Galtung, 1964: p. 1) to peace as 'absence of violence in all its forms – physical, social, psychological, and structural' (Reardon, 1988: p. 19). Historically, however, peace has been understood in reference to the absence of violence, hostility, or war. The Nobel Peace Prize, for instance, was instituted to recognize and honor those seeking to abolish or reduce standing armies as well as for promoting congresses or meetings that may lead up to signing peace treaties (Lundestad, 2001). In the academy, Peace Studies, which started in the mid-twentieth century with the first program in the United States, created in 1948 at the then Manchester College in Indiana and focused on understanding how peace can be reached through conflict resolution.

Many contemporary scholars operate with an understanding that peace is "not just the absence of war but also the presence of the conditions for a just and sustainable peaceful society, including access to food and clean drinking water, education for women and children, security from physical harm, and other inviolable human rights" (Kroc Institute, 2012). As a result scholars have expanded how they study and understand peace so as to allow for possibilities of seeing people in all categories actively participating in peace building rather than as a state or government endeavor. It is in line with this approach that scholars such as John Paul Lederach have sought to pay attention to the conditions that ought to be present for peace to prevail. Lederach argues that for peace to be attained there has to be the cultivation of 'moral imagination.' Moral imagination, he argues, "is cultivated through four capacities – first, the capacity to imagine ourselves in a web of relationships that include our enemies; second, the ability to sustain a paradoxical curiosity that embraces complexity without reliance on dualistic polarity; third, the fundamental belief in and pursuit of the creative act; and finally, the acceptance of the inherent risk of stepping into the mystery of the unknown that lies beyond the far too familiar landscape of violence" (Lederach, 2010: p. 5).

Peace building becomes a process embedded in reflections about self and the other as well as in creative ways of relating to others one has had no prior relationship with or with whom such a relationship is based on limited contact or even stereotypes.

Contributing to this expanded definition of peace, Olivier Urbain expands on Galtung's earlier definition of peace to show how empathy, creativity, and nonviolence can be understood as components of peace only when placed within contexts that would otherwise negate peace. He notes that creativity is needed to enable people unlock their powers of

 http://dx.doi.org/10.1016/B978-0-08-097086-8.64119-3

imagination that enables them to articulate similar goals with those with whom they may be in conflict; that creativity can work best when paired with empathy, otherwise it can be used to manipulate, swindle, or trick people; and, that conflict transformation comes when creativity and empathy work together (Urbain, 2008: pp. 4–5). When considered together, all these multiple definitions of peace and the similarly diverse approaches to peace building, all exhibit common threads that connect them, including references to violence, harmony, and human thriving. The pursuit of peace, therefore, comprises an active agenda that requires sensitization, negotiation, imagination, creativity, human flourishing, and long-term commitment. Peace building is not an event but a process.

Peace Building

To cultivate and maintain a culture of peace individuals, communities, and governments ought to proactively pursue it through a strategic process that builds the right circumstances for its thriving. Peace building, as Lesley Pruitt notes, is an active process that is pursued in order to establish 'positive peace.' Pruitt uses the phrase 'peace building' to "refer to bottom-up approaches aimed at preventing, reducing, transforming, and assisting people to recover from all forms of violence, including structural violence that has yet to result in widespread civil turbulence" (2013: p. xv). Institutionally, peace building has been championed by the United Nations (UN) through many of its departments, especially United Nations Educational Scientific and Cultural Organization (UNESCO). At its 1995 General Conference UNESCO introduced the concept of a 'culture of peace,' which it used to refer to "values, attitudes and behaviors that reflect and inspire social interaction and sharing, based on the principles of freedom, justice and democracy, all human rights, tolerance and solidarity" (Adams, 2003: p. 34). UNESCO's commitment to peace is also well represented in its motto, which reads, "building peace in the minds of men and women."

Elise Boulding, who attended the 1995 UNESCO meeting, carried out extensive work on peace and education and has provided many insights into the concept of the 'culture of peace' (2000). She argues that approaches that cultivate and acknowledge differences articulated through individual behavior and existing social structures as well as finding acceptable ways of appreciating uniqueness and similarity lead to a culture of peace. As a social scientist and activist, Boulding injected into the study of peace the need to understand the world before changing it and as such rejecting any essentialist positions taken on how people or cultures are or behave and instead asserting that humans have the potential for both peaceable and warlike behaviors, for a culture of violence as well as a culture of peace. Her 'rewriting' of history to bring in stories not represented in the dominant historical narratives of conquest allowed her to show how including the untold histories of women, the nurturing of families, the celebration of events, and all forms of human creativity represented an existing culture of peace that had been overlooked by an aggressive focus on the culture of war and conquest (Boulding, 1976, 1988, 1989). It is in this inclusive approach to peace building that youth, through the use of music, find a place to engage with the process.

Youth, Music, and Peace Building

In conflict-prone societies and those wrestling with recurrent election violence, internal resource-based tensions as well as those teetering on the brink of political violence, there are clear needs to cultivate a culture of peace. Many youth have turned to music as their platform from which to appeal to and convince their fellow citizens to build such a culture of peace. As a result music has been used to heal fractured relationships torn apart by ethnic-based violence and police brutality and to prevent a reoccurrence of violence or repeat confrontations. Youth are also very much aware that for real peace to prevail, socioeconomic and political challenges have to be addressed effectively. As they sing about peace and appeal for peace, youth challenge those in positions of power as well as their own peers to create conducive circumstances for all to thrive. Building and sustaining a culture of peace is critical for youth who not only are in most cases the majority in their societies but also are negatively affected by processes that undermine peace.

For many youth, pursuing peace is an act that is simultaneously voluntary as it is coerced. On the one hand, because youth are caught up between childhood and adulthood, they often find themselves unrepresented in areas of decision making that produce violence and social strife, often thrust into it because they are vulnerable. On the other, given their expanded understanding of the world they live in, their increased education opportunities and access to mass media, they no longer are content to wait in the fringes of society as others define their lives. Instead they take charge and seek to not only define themselves but also redefine their societies. These two realities of youth identity provide a complex lens through which to understand their attraction to and participation in peace building. Different phenomena have aided in this position taken up by youth including global processes that have pushed the sources and implications of social action beyond state borders, providing unprecedented advantages to youth interested in building peace in their communities.

Transformations in communication and information sharing have opened up opportunities for shaping individual ideas about the world and the local. As the emergence and expansion of youth-led initiatives such as *Ushahidi* – an open source project that allows users to crowd source crisis information that is then sent via mobile phones – has shown how youth social networks provide opportunities for action through the circulation of information about ongoing activities, existing organizations, people to contact, and a reduction of the practical cost attached to participation. Other forms of media such as music also allow youth to draw on a transnational and transregional orientation, to assess the social, political, and cultural conditions of their time. With socially and politically charged songs, artists give voice to the concerns of previously ignored groups and assert the legitimacy of those concerns in shaping opinions and policies on a national and regional level. The use of hip-hop in democratic movements in Tunisia and Senegal, for instance, shows the role youth play in shaping political outcomes in their societies (Honwana 2012). These new ways of communicating provide youth with social networks that enable identity mobilization and the gradual development of social movements that build platforms for positive change.

How does involvement in such social networks affect individual identity and behavior and how does it shape not only policy but national and international responses to peace building? How do individual networks shape other important forms and features of collective action? What is the connection between social networks and individual participation in social movements given that social ties are critical in mobilizing collective action? What are the mechanisms and dynamics that induce people to become involved in collective action and how does that provide a holistic explanation of the process of individual participation? If we take social ties to be important in shaping collective action which could lead to social movement and that participants are recruited through preexisting social ties, what are the ties that bind youth in championing peace? Similar to Tunisia and Senegal, the 2011 political power harnessed by Egyptian youth through social networks mobilized by social media and music has been recognized for its role in bringing down a longtime political entity. Tahrir Square, the center of the revolts in Egypt, provided fertile ground for new songs as well as highlighting old ones as artists sought for democracy and freedom through such songs as *Sout Al Horeya* (Voice of Freedom), *Matloob Zaeem* (Leader Needed), and *Ya El Midan* (O Square) (Watch Soud Al Horeya here https://www.youtube.com/watch?v=PAEt6QJJi-c, Matloob Za3eem here https://www.youtube.com/watch?v=bk2JIohWdHY, and Ya El Midan here https://www.youtube.com/watch?v=VQTmvIKI-f8 and here https://www.youtube.com/watch?v=ljVTj9yu-ns for English subtitles). These movement-based claims on the political system that speak the language of inclusion and representation are also examples of how youth are linked and even immersed in virtual/transnational communities and networks that have political and economic consequences on their lives.

The Egyptian revolts, along with other forms of the 'Arab Spring,' provide a good illustration of the vitality and creativity youth bring to public protest movements and which then shape political and social trends in their societies. Through activism sparked by their generation's increasingly interconnectedness brought by social media and technology, these youth, like many of their counterparts in other parts of the world respond to the reality of low wages, high unemployment, and poor governance, all closely tied to economic issues. Unemployment and poor governance that are mostly experienced by youth by virtue of their position in society fuel discord and negatively affect peace. Manifestations of such discord are also exemplified by the 'Occupy Wall Street' movement are organized by youth in major cities of Europe and North America, seeking to arrest a social system that has disenfranchised many. The youth involved in these movements mobilized through music and chants, demanding more social justice and equality for themselves as well as others across many boundaries (Watch video of Lupe Fiasco's song 'The End of the World' that was the Occupy Wall Street anthem here http://www.youtube.com/watch?v=PDDCmHr0G2E and here http://www.youtube.com/watch?v=E8VcUxpvzxQ for Jeremy Gilchrist's song 'We are the 99%'). Indeed, youth-led movements such as those in the United States and countries in Europe and Africa speak the language of inclusion and representation and seek the provision of services for real social transformation that ultimately lead to broad flourishing and prosperity for all.

Since peace is a condition that is necessarily perceived to be long lasting, many social movements do not always sustain peace because they are often mobilized through spontaneous political protests in which collective action is directed at a specific entity deemed to be impeding on the participants' identified rights or privileges. As soon as the target is met such social movements diminish. Others slowly wear out because the targeted problems are so entrenched in the system that they require a major structural shift to accomplish. Even in cases where targets are met, lasting change is not always attained as in the case of Egypt where youth that were initially involved in the movement were mostly sidelined in the new political dispensation as the Muslim Brotherhood took political power. This is the disillusionment that triggered the ensuing Egyptian demonstrations against president Morsi that escalated in 2013, leading to his ouster by the military. Such processes highlighted here may not be the best strategy for upholding peace but they reflect the reality of the fragile nature of peace building in the world. Music has the potential to be the thread that unites and holds together social movements across time and space because of its ability to endure beyond the immediate social circumstances within which it is produced. Music can be recorded, played back, shared across different social platforms, and even reconstituted to capture newer meanings. It is this versatile nature of music that allows it to be variably used by youth for peace building. In the following section, I share some examples from different parts of the world of how music has played an important role in reflecting and shaping peace building.

India

In 1969 John Lennon, still a member of the Beatles, released a single titled 'Give Peace a Chance' in Montreal, Canada. The song soon became a major hit around the world and especially in the United States where antiwar activists opposed to the Vietnam War used it. In 2012 two young men calling themselves 'Still Rhyming' from Nagaland, Northeast India performed a hip-hop song titled 'Give Peace a Chance.' The two artistes that form Still Rhyming are 'Rhymez Disguised' and 'Doak 17,' and perform hip-hop and R&B music, mostly in English. They are the first hip-hop group from Northeast India to be featured on Vh1 Hit Factory music show in India and when the video for the song was released in August of 2012, it won the 'best music video award' at the 2012 annual music awards of Nagaland held in September of the same year. The video starts with images of the terrorist attacks on the World Trade Center in New York in 2001, refugees in the Congo scrambling for relief food, and reports of suicide bombers detonating two bombs following each other. The two artistes are shown flipping through the television channels displaying these world images and asking, "Have you ever thought why are we facing this? It ain't supposed to be the way we see it." The artists then offer a solution, saying, "I wish we get solutions, I know it's a little bizarre, but if you want peace and love then prepare for war against evil ways" (Watch 'Give Peace a Chance' here https://www.youtube.com/watch?v=iNUubAvkuk8 and go here http://www.metrolyrics.com/give-peace-a-chance-lyrics-still-rhyming.html for the song lyrics). The video is shot in a space with a background of

multiple colors and many television sets lined up behind the musicians but the most prominent identifiable image is the picture of Malcom X placed at the right-hand corner.

Nagaland, a state in northeastern India, has a population of almost 2 million according to 2011 census data and is neighbor to Myanmar (Burma) to the east. It is also one of the only three predominantly Christian states in India with Christians constituting 90% of the population. Nagaland's position as an immediate neighbor to Myanmar has made visible to these musicians the many political challenges faced by many of its residents and shaped the music content of Still Rhyming. Moreover consistent with India's persistent caste system Nagaland also has its recognized scheduled caste communities, leading Still Rhyming to sing about its role in dividing up people. They wonder where humanity is when two lovers are put apart by caste and creed based on 'old beliefs.' They call for peace to be given a chance to make the world a better place. This reference to local cultural realities, the projection of transnational images, and reference to world catastrophes makes hip-hop such an important youth phenomenon for twenty-first century peace building. It allows them to creatively articulate their message with the aid of images that have the ability to remind, reflect, and reference phenomenon and events relevant to a cross section of population.

Israel and Palestine

Israel and Palestine represent one of the most prominent conflicts of the Middle East and despite many attempts to broker peace violence has almost become the sole identity of the relationship between the two societies. But that is not the only reality of the region. As Stein and Swedenburg (2005) show, a focus on the dynamic forms taken by popular culture allows us to move beyond the binary oppositions and preponderance of violence that tend to dominate much literature and reporting on the Israeli–Palestinian conflict. Music has been used historically to express various sentiments regarding the relationship between Palestine and Israel. Songs were sung in the mid-twentieth century urging Palestinians and other Arabs to liberate their stolen homeland (Massad, 2005). Today we see a different kind of approach to the conflict with youth from both societies engaging in peace building through music. One such group is named 'Heartbeat' that exemplifies the role music can play in bringing the two warring sides together.

Composed of youth from both Israel and Palestine, Heartbeat performs and tours together playing music, holding camps, recitals, and workshops, and developing ensembles that promote peace. The group was founded in 2007 by the efforts of Aaron Shneyer supported by a Fullbright-MTVu fellowship (Heartbeat 2012). One of their songs titled *Bukra Fil Mishmish*, for instance, explores the connections that exist between the two societies but which are torn by constructed differences. The song's title loosely translated means, 'when pigs fly' in reference the perceived impossibility of their coming together and making something happen (Video of the song can be watched here http://www.youtube.com/watch?v=7Xw6NiUb44o#t=68). The song is presented in different languages and styles of music to honor the different identities represented by the group members. The group comprises Guy Gefen from Rehovot (Israel), Muhammad 'Moody' Kablawi from Haifa (Palestine), and Siwar Monsour from Tira (Israel), among others. In an interview with Missy Daniel for PBS at the Busboys and Poets in Washington, DC, Guy says that, "peace is not only something that the governments will sign on a paper and that's it, we'll have peace." Peace can be created through people without any governments getting involved (Watch video and read interview transcript here http://www.pbs.org/wnet/religionandethics/2013/07/03/heartbeat/15189/). The song *Bukra Fil Mishmish* presents a balanced representation of the voices and styles of the three artists mentioned here with each not only contributing to the lyrics but also to a different music style. Guy sings about breaking down the walls, taking down the flags, and understand that they are all humans. Moody sings about the need to make one's anxiety disappear because liberating self leads to freedom and Siwa asks to be given the chance to play her violin. Research has shown that when individuals or groups in conflict share space and listen to each other, positive relationships emerge that could lead to peace through empathy and tolerance for ambiguity (McNair 2003; Ramirez 2007). The music and programs that Heartbeat uses to bring together Israeli and Palestinian youth have great potential for healing the Israeli–Palestinian conflict. Admittedly, this will not come quickly or easily.

Kenya

The Kenya electoral scene has been marred by violence since the advent of multiparty politics in 1991 but the most discussed is the 2007 postelection violence, which led to international intervention through Kofi Annan acting as a peace broker for the two competing sides represented by the incumbent Mwai Kibaki and the challenger Raila Odinga. In the 1992 and 1997 elections, violence emanated from frustrations of, in part, many feeling like they did not have power to make a difference in the politics of the day due to rigging and other corrupt practices. Indeed, in the 1992 election, close to 1 million youth were denied national identity cards needed to register to vote (Mutua, 2008). The 2013 elections resulted in a different outcome, however, with no acts of violence reported primarily due to strategic processes for peace laid down prior to elections including those undertaken by youth. Having gone through a major bout of postelection violence in 2007 that went on for weeks into early 2008 and leading to more than a thousand people dead and thousands displaced, Kenyans were keen on avoiding a similar scenario in the 2012/13 election period. There were a number of issues that could have triggered violence including the election date being moved from November 2012 to March 2013 and the final presidential election results delayed for days before being decided by the Supreme Court. But Kenyans remained calm through it all determined not to repeat the same violent responses witnessed in 2007. After the 2007 postelection violence Kenyan musicians played a major role in spreading messages of peace. A well-known artist named Eric Wainana, for instance, composed a song titled 'Daima' (forever) which extols Kenyans to live in peace and reflect the symbolized identities of the colors of Kenya's flag – black for their skin color, red for the blood shed for independence, green for their land, and white for

peace (Watch 'Daima' here http://www.youtube.com/watch?v=Dh3oKHJ7KZQ accessed 28.12.13. The Web site also has the song lyrics in the original Swahili language as well as an English translation). A group called Wakenya Pamoja (Kenyans together) comprising many young Kenyan musicians along with some pastors composed a song titled 'Wakenya Pamoja' in January 2008 in the midst of violence calling for peace (Watch video here http://www.youtube.com/watch?v=1y7O857Q1jk and here for one with English subtitles http://www.youtube.com/watch?v=KiVrP9AAMUg accessed 27.12.13.). And as Kenyans waited to vote in the 2013 elections a musician named Juliani, with a number of other artists, performed a song titled 'Mama Kenya' (Mother Kenya) in which they asked for peace while highlighting the vulnerability of women and children during election violence (See video of 'Mama Kenya' here http://www.youtube.com/watch?v=rj0mBVjNJXQ accessed 28.12.13.).

In Kenya as it is in other parts of Africa no segment of the population has adversely experienced the realities of violence and unemployment, as have the youth who comprise the majority of the population. Kenyan youth under the age of 30, for instance, constitute up to 70% of urban populations with many of them being directly involved in unemployment and poverty. They have, for many years, also been appropriated by politicians to foment chaos to the advantage of the politicians while others have been co-opted into militias to terrorize communities, including their own. And yet Kenyan youth have been keenly involved in processes that bring about peace especially through the composition and performance of music as seen in the few examples shared here. It is, however, in creating better contexts for youth to thrive that could lead to permanent peace. In 2008 the US Agency for International Development and the international development organization Mercy Corps came together with youth in Kenya to form 'Yes Youth Can,' a volunteer-based group of youth all over Kenya. The group brings together Kenyan teens and young adults to form village-level 'bunges' – youth councils – that, among other things, discourage violence, encourage civic activism, and provide young people with training and resources to start new businesses and nonprofits (Docksai, 2013). This group has helped many youth find meaningful employment and connect with their communities in ways that help build a lasting culture of peace. A few months before the 2013 elections, for instance, many youth from the Yes Youth Can group were vigilant in their areas of residence, keeping watch for any incidents that might fan violence and reported them to local and national authorities via their cell phones (Docksai, 2013).

Mozambique

On 5 February 2008, angry mobs brought all business to standstill in Maputo, the capital city of Mozambique. The mob was rioting, taking over the city streets in protest against a 50% hike in private minibus fares. This focus on transportation resonated with many city residents. A majority of them use minibuses as their most common means of transportation (See this story at http://freemuse.org/archives/1223 accessed 16.12.13.). Ultimately the rioters were able to get their way – forcing the government to not raise the price of petrol that had prompted the fare hike. Two months later on 30 April 2008 Mozambican rapper Edson da Luz (commonly known as Azagaia) was taken to the Maputo City attorney's office where he was questioned for an hour (Docksai, 2013). His crime? Composing a song titled *Povo no Poder* (people in power) in which he calls those in power corrupt thieves that have ruined the country, and threatens to barricade roads, stop buses from running, and respond to any police violence with even more violence (See video here http://www.youtube.com/watch?v=RhSKixT-n0w accessed 27.12.13.). Maputo city authorities saw a direct connection between Azagaia's song and the riots and brought him in to gauge the extent of his instigation.

Azagaia's music finds fertile space for social relevance among the large population of youth who are also unemployed. In 2011, an estimated 66.6% of Mozambique's total population was younger than 24 years with 21% of them falling in the 15–24 years of age category (See, www.cia.gov/library/publications/the-world-factbook/geos/mz.html accessed 26.12.13.). As Honwana's ethnographic research shows, 'corruption, nepotism, and favoritism' are the reason for lack of active 'involvement in politics,' among youth in Mozambique, leading them to feel excluded from being part of the political machinery and process unless they become 'yes men' (2012: pp. 112–13). Such exclusion leads to frustration and cynicism that in turn broods anger that is represented in Azagaia's music and the riots that took place in Maputo. For Mozambique to continue enjoying any form of peaceful existence, these social realities faced by youth as well as their expressed sentiments captured through such media as music, cannot be ignored.

Senegal

In the same year Azagaia was arrested, a Senegalese rap group called Kuer Gui released an album titled *Nos Connes Doleances*, whose song 'Coup 2 Guelle,' (The video can be watched here http://www.youtube.com/watch?v=ZLrTLPrUodQ (with English captions) and here http://www.youtube.com/watch?v=Q-6H3YCx3x4 (without captions)) castigated the corrupt and inept government of president Abdoulaye Wade and blamed him for a '7-year expensive reign' that had led to youth 'drowning in hunger and unemployment' (Honwana 2012: p. 119). Senegalese youth have almost always been at the center of social change. In 1988 they took to the streets to protest election results because of the lack of transparency in the voting process. In the 1990s youth again presented themselves as a generation sensitive to their environment when they decided to clean up the city of Dakar under the philosophy of a movement termed 'set setal' (order and cleanliness). The movement was geared at cleansing society through the restructuring of individual lives and neighborhoods and advocating for the 'sanitation' of public and social 'morals.' Through graffiti, frescoes, and other symbolic images, the youth made their presence on the political scene known with their new motto: order and cleanliness (Diouf, 1996).

With the withdrawal of the state from providing social services following structural adjustment policies, the youth became even more aware of the difficult situation they faced economically. This trend continued into the 2000s with

rising prices of staple foods, and fuel, manifesting themselves not only in people's individual lives but also through power cuts, floods in Dakar's suburbs, crisis in the educational system, and the health sector. These conditions led to the birth of another youth movement known as 'Y'en a Marre' (literally meaning 'we are fed up'). The movement brought together youth within the large Dakar hip-hop community, civil society members, journalists, and others opposed to the corrupt and inefficient regime of Abdoulaye Wade and gained even more momentum in its opposition to Wade's desire to tamper with the constitution in order to extend his eligibility to run for presidency a third time. Y'en a Marre was officially born in January 2011 and found its name from a song with the same title by a musician from Ivory Coast (but exiled in Mali) named Tiken Jah Fakoly (See video here http://www.youtube.com/watch?v=KVUwpFk3ZpA). His other songs including one titled 'Promesse Bla Bla' and 'Quitte Le Pouvoire,' that castigate leaders who not only fail to fulfill their promises to their electorate but also insist on staying in power too long (See video of 'Promesse Bla Bla' here http://www.youtube.com/watch?v=Lso_VLgxuhc and of 'Quitte Le Pouvoire' here https://www.youtube.com/watch?v=6y7Y2UqgckY). In December 2007, the year that the song was released, Tiken Jah Fakoly was declared *persona non grata* in Senegal because he had criticized Abdoulaye Wade's government. The hip-hop group Keur Gui was part of Y'en a Marre group and used their music to mobilize youth to participate in the installation of regime change through voting (Honwana 2012).

Pulsating into the Future

Music has the ability to enable peace building by promoting healing individually and collectively and by facilitating the rebuilding and restoring of relationships in a nonthreatening manner (Slachmuijlder, 2005). Music is also able to build peace by helping develop dialogue between communities (Pruitt, 2011) and stimulating social engagement that can create cultural awareness and appreciation (Heble, 2003). Such initiatives ultimately lead to peace building (Lederach and Lederach, 2010). As a genre of expressive culture, music has a number of qualities that provide it with this ability for peace building including its nonthreatening identity, portability, and flexibility. Music making itself as well as its performance creates an environment where participants (composers, singers/performers, and listeners/viewers) feel comfortable sharing their thoughts, ideas, and dreams with each other and even strangers.

Music welcomes different interpretations of the meaning and style it presents, it can carry different messages depending on who is involved, when and where, and no one is fearful of being ridiculed for interpreting a song wrong. Songs are open to multiple interpretations and renditions. Indeed, today's popular music often samples songs from the past and gives them new meanings and melodies. Peace building through such a genre allows participants to feel welcome and to apply their creativity in fruitful ways that not only seek a better life for all but also the changes necessary to make it happen.

Relevant Websites

http://www.heartbeat.fm/ – Heartbeat unites Israeli and Palestinian youth to build trust and transform conflict through the power of music. Founded in 2007 under a Fulbright-MTVu fellowship, Heartbeat empowers Israeli and Palestinian musicians by creating opportunities and spaces for musicians from both sides to hear each other and work together to build trust between their communities. Since 2007, over 100 youth musicians have come together through a variety of programs including retreats, workshops, camps, overseas exchanges, and the development of ensembles. Heartbeat's core program focuses on the establishment and facilitation of ensembles of young Arab and Jewish musicians (14–21 years of age) who come together weekly for sustained music-based dialogue programs in multiple cities. During these weekly sessions, Heartbeat youth explore each other's cultures and narratives in safe, politically neutral settings that support creativity and communication. Developing skills in improvisation, songwriting, performance technique, music theory, communication, and leadership while engaging in dialogue about their daily lives and the conflict, participants raise their critical consciousness, and harness their agency to build trust between their communities.

Abstract

Zooarchaeology is the subdiscipline of archaeology that focuses on the analysis of animal remains from archaeological contexts. An integral part of prehistoric archaeology since the emergence of the discipline in the nineteenth century, zooarchaeological analyses can provide information on the chronological position of archaeological sites, on the nature of past landscapes, on human interactions with those landscapes, on human diet, and on a wide variety of past human behaviors that would otherwise be invisible to us. Such analyses can also provide information relevant to the conservation and management of living animals.

Introduction

Zooarchaeology is the subdiscipline of archaeology that focuses on the analysis of animal remains from archaeological contexts. The term has a less euphonious twin, archaeozoology, which has less currency in English than it does in other languages. While some have distinguished among the kinds of approaches that might be treated under these two terms (Reitz and Wing, 2008), research identical in form and content is published under both names.

A thorough history of zooarchaeological research has yet to be written. It would be a daunting task to do so, since highly relevant literature in a diverse variety of languages extends well back into the nineteenth century. Zooarchaeology has continued to be an inherent part of archaeological research for well over a century for a wide variety of reasons: faunal data can help place archaeological sites in time, provide detailed information on past human diets, provide detailed knowledge of the environments in which past peoples lived and on human impacts on those environments, and, less securely, provide insights into the nature of the social organization of the people involved.

Even though zooarchaeology has always been an integral part of prehistoric archaeology, zooarchaeology as a distinct and recognizable subdiscipline extends no further back than to about 1970. Prior to that time, most research dealing with animal remains from archaeological sites was conducted by people whose primary training and interests lay outside of archaeology itself, usually within zoology or paleontology. The research done by these practitioners was frequently of superb quality and enduring value, but was often poorly integrated with other aspects of the archaeological research involved.

This situation began to change in the mid-1960s, as archaeology as a whole began to shed its largely descriptive roots and turned toward more explicitly scientific approaches to the past. Within a decade or so, there came into existence a set of scientists with intensive training in both biology and archaeology whose research focused on zooarchaeological matters, and who began developing techniques, methods, and theory relevant to answering those questions (e.g., Grayson, 1984; Klein and Cruz-Uribe, 1984). Today, most well-regarded archaeology PhD programs in the USA now include zooarchaeology as part of their training program.

Compared with other object-based research realms in archaeology, including lithic and ceramic analysis, zooarchaeology benefits tremendously from the fact that the units studied are provided by biology, and that their biological meaning is never in doubt. These units tend to be of two prime sorts. First, there are taxonomic units, drawn from the Linneaen system – species, genera, and families, for instance. Second, there are anatomical units – the separate parts of the vertebrate skeleton, for instance, or of the insect exoskeleton. As a result, while zooarchaeologists might argue over the identification of a particular specimen – and making secure taxonomic identifications by comparing ancient bone fragments with known modern comparative skeletons is the core of zooarchaeological lab work (Driver, 2011) – they do not argue about the meaning of their classification systems (*see* Archaeology: Philosophy and Science). This is often not the case in lithic or ceramic analysis – as anyone who has worked with European Neanderthal stone tool assemblages or with ceramic Poverty Point objects in southeastern USA can attest.

Vertical Applications

Much zooarchaeological research is directed toward understanding change through time, and relies heavily on the

analysis of data from stratified archaeological sites or from sites which, if not stratified, can be arrayed in time. As a result, such research has a strong temporal, or vertical, component, and can differ in approach from research that focuses on a particular site or set of sites at a precise point in time, and is thus primarily spatial or horizontal in emphasis. These different approaches may be driven largely by the research problems that intrigue a particular investigator, but they may also be driven by the kinds of sites available for analysis. Because vertical zooarchaeological research tends to focus on change through time, it often draws more heavily on biological theory than do horizontally oriented analyses, which tend to depend more heavily on less well-developed social theory. Even though this is the case, vertical analyses often have horizontal components, horizontal analyses often have vertical components, and either approach can make use of either kind of theory.

In recent years, vertical zooarchaeological research has revolutionized our understanding of the relationship between prehistoric peoples and their biotic environments. It has done this by showing the impacts that even small-scale societies can have on their faunal landscapes, and by showing that those impacts can force changes in the behavior of the people themselves.

Those impacts can be dramatic. For instance, it has long been clear that people caused the extinction of some 11 species of large, flightless moas in New Zealand within a few hundred years of the human colonization of these islands some 1000 years ago. While it is not known what combination of human hunting, habitat alteration (largely by burning), and human-introduced predators (rats and dogs) caused moa extinction, human activities were certainly to blame.

During the past several decades, however, zooarchaeological work throughout Polynesia has shown that bird extinctions followed human arrival in island settings with deadly consistency. While large, flightless birds were particularly vulnerable, smaller, flighted species were lost in high numbers as well (Steadman, 2006), and over half the species that comprised the Polynesian avifauna may have been lost after the initial human colonization of these islands. As is the case with New Zealand's moas, the exact causes of each extinction is unknown, but some combination of human hunting, human-induced vegetational change, and human-introduced predators was involved (Kirch, 2005; Steadman, 2006).

Zooarchaeological research has detected impacts of this sort, though not necessarily of this magnitude, in other parts of the world as well. In some of these places, the branch of behavioral ecology known as foraging theory has been used to understand not only why particular species declined in abundance under conditions of human predation, but also the impact of such declines on the people who caused them.

Among other things, foraging theory is designed to answer two apparently simple questions. First, given that resources are not often distributed randomly across the landscape but are instead clumped into patches (like ducks at oases), which of those patches will a predator choose to visit and how long should it stay there? Second, given that multiple prey types, or species, exist in a given patch, which of these prey types should a predator bother to pursue upon encountering it? The former issues are treated with what are called the patch-choice and patch-use models, the latter with what is called the prey-choice or diet-breadth model, but combinations of the two also exist. Developed in biology for nonhuman predators – but inspired by microeconomic theory from economics – foraging theory has seen wide application in contemporary human contexts, with impressive successes (Winterhalder and Smith, 2000; Nettle et al., 2013).

In recent years, it has begun to be applied to archaeological contexts as well (Bird and O'Connell, 2006). These applications have typically assumed that human prey choice is driven by energy returns, and that up to a point, larger animals provide higher returns than smaller ones. From this, it follows that vertical analyses of archaeological faunal assemblages should show that these animals face the steepest decline in the face of human predation. Zooarchaeological research has shown that they do just that.

In the San Francisco Bay area of California, for instance, it has been shown that such large-bodied animals as elk and deer formed an ever-decreasing part of human diets between 3000 and 2000 years ago, while such smaller and more costly animals as sea otters became increasingly important. After 2000 years ago, this pattern changed, and deer began to become more common in the diet, but only because sea otters themselves had become rarer, and it now paid to go further afield to hunt deer. The increasing use of distant deer-hunting patches was documented through analyses of patterns in anatomical part representation that showed an increase in field processing. In addition, the carcass portions that were returned to villages were subjected to more intensive processing – to judge from bone fragment size and stone tool damage – to apparently squeeze the maximum yield out of the declining availability of animal tissues. As all this was happening, sturgeon, the largest fish available in the area, not only declined in abundance through time, but even declined in average age and size. A wide range of large-sized bird species such as geese and larger shorebirds also declined in abundance over time compared to smaller and more elusive birds (Broughton, 1999, 2013).

The moa case, introduced earlier, provides another example. It has been realized for many years that after moas became extinct, human diets in New Zealand became dominated by small prey species, including fish and shellfish. Recently, Nagaoka (2005) has used foraging theory to provide the details of this process.

The prey-choice model predicts that, as resources that provide high-energy returns decrease in abundance, diets will broaden and the number of prey types included in the diet should increase. Using data from the Shag Mouth archaeological site on the east coast of New Zealand's South Island, Nagaoka has shown that, as the abundance of moas decreased through time here, not only did higher cost, smaller vertebrates become more important in the diet, but the number of species included in the diet increased as well. She has also shown that as moa populations dwindled, the places people went to procure food changed substantially. As time went on, for instance, people began to bring only the meatiest parts of moas back to Shag Mouth – as with deer mentioned earlier – suggesting that they had to go further and further to hunt those moas that still existed. In addition, during the earliest occupations of the site, most prey species

came from either inland or coastal settings. Only late in the history of the site did people begin to exploit offshore resources, mainly barracuda, heavily, and this only after the human activities had caused depletion of larger vertebrates available nearer-by. All this occurred within a period of less than 200 years, between about AD 1300 and AD 1500.

While the trends from these examples have been documented with standard zooarchaeological data (bone-based patterns in species abundance, anatomical portions, age/size structure, bone fragmentation), more recent work has applied information from isotope chemistry (geo-sourcing) and ancient DNA derived from animal bone to evaluate, for instance, long-distance hunting and population declines of favored game species (Grimstead, 2011; Broughton et al., 2013). These approaches are based on the facts that animals record in their bony tissues chemical signatures (e.g., ratios of different kinds of strontium) unique to their local environments and that genetic diversity is closely tied to the population size of animals. Both these chemical signatures and DNA can be readily extracted from animal bones tens of thousands of years old and such data are becoming increasingly important in zooarchaeological research.

In the last several decades, cases of resource depression such as those from San Francisco Bay and New Zealand described earlier, have been documented in a wide range of times and places all over the world (e.g., Kirch, 2005; Stiner and Munro, 2011). Most importantly, the implied declines in foraging efficiency (overall calories generated per hour of hunting) and increasing risks of food shortfalls have been linked to a wide range of other trends in human behavior and biology. These include, but are not limited to, increases in the degree of violence and warfare, elevated levels of disease and dietary stress, the emergence of social hierarchies, and even to such monumental phenomena as regional abandonments and the collapse of past civilizations (Broughton et al., 2010; Emery, 2007; Schollmeyer and Driver, 2013).

However, patterns of long-term stability in animal resource use and apparent sustainability have also been observed (Campbell and Butler, 2010; Etnier, 2007). Anthropogenic depressions seem to occur in contexts characterized by high human population densities fueled by high levels of subsistence productivity derived from either a rich array of wild resources or agriculture. Understanding in more detail the variables influencing apparent sustainability versus resource depression is an important current issue in zooarchaeology.

Zooarchaeologists have thus shown some of the kinds of impacts that even small-scale societies can have on the faunal landscape, and the influence that those impacts can in turn have on the people themselves. These kinds of theory-driven studies are fairly new. More traditional are zooarchaeological analyses that show the influence that 'natural' (i.e., nonanthropogenic) environmental changes can have on human adaptations, but these make far heavier use of, and greater contributions to, biological theory than they did in even the fairly recent past.

For instance, the site of Grotte XVI in southwestern France contains a series of archaeological deposits that date to between 36 000 and 12 000 years ago. Zooarchaeological analyses of the large mammal bones from these deposits showed that the percentage of reindeer that people hunted increased steadily through time, from 47% of all the large mammals at about 36 000 years ago, to 94% of those mammals at about 12 000 years ago. Comparing the dated archaeological record at Grotte XVI with a reconstructed summer temperature curve for southern France demonstrates that the increase in reindeer abundance was associated with a decrease in summer temperature (Grayson et al., 2001). Biogeographic theory shows that the challenges posed to mammals by temperature extremes, either hot or cold, can lead to mammalian communities that are dominated by a small number of species, and Grotte XVI, as well as other sites, show this process in operation through time.

Thus, vertical zooarchaeological analyses have illustrated in rich detail the complexities of human relationships with their faunal landscapes. In some cases, people caused the abundances of the species on which they preyed to decline dramatically, and both people and prey paid the price. In others, people were forced to react to environmental changes for which they were not responsible, and the results can be readily seen in their diets, and probably in other aspects of their lives as well.

Horizontal Applications

Horizontal approaches to zooarchaeology focus on fine-scale analyses of faunal material across space within, and occasionally between, sites, though other aspects of faunal data play a role here as well. These distributions are usually used to test hypotheses about social organization, hunting patterns, or other aspects of past human behavior, or to infer aspects of such behavior from the distributions themselves.

Work at the *c*12 500 year-old site of Verberie, located in the Oise River Valley, north of Paris, provides a simple yet compelling example of such an analysis. Unlike Grotte XVI, which is a cave, Verberie is an open-air site consisting of a series of thin depositional layers, each of which represents a distinct occupation of short duration. These occupations vary in extent from 45 to 250 m^2, and are marked by stone-lined fireplaces, around which stone artifacts are concentrated. The site is also quite rich in well-preserved bone, most of which is of reindeer (Audouze and Enloe, 1997; Enloe, 2004). The Verberie bones are distributed across each occupational layer, but many are found concentrated around relatively bone-free, circular zones. These concentrations tend to be marked by parts of the reindeer skeleton that do not have much meat associated with them in the living animal, suggesting that they had been left behind after butchering and removal of the meatier parts. In addition, these concentrations are located several meters from the hearths, which are, in turn, located several meters from one another. Taken as a whole, however, the occupation floors at Verberie contain all parts of the caribou skeleton. Since reindeer are large animals that are not likely to have been transported far when whole, the Verberie occupations would appear to represent hunting camps.

One of the most powerful tools zooarchaeologists have available for studying social organization is provided by what is known as refitting. There are two sorts of bone refitting, the first of which involves reassembling broken bones. Refits of this sort

can tell us about the stratigraphic integrity of a site, since fragments of the same bone found in different strata demonstrate that specimens have moved up or down the deposits. They can also provide much more precise information as to the nature of the faunal assemblage as a whole, since small shaft fragments often cannot be identified to species on their own, but can be identified once reassembled (e.g., Marean and Kim, 1998).

In the second approach, developed by Enloe (2004), detailed measurements and morphological comparisons allow bones that are highly likely to have come from the same individual animal to be refit to one another. If such refit body parts are found on spatially disparate parts of an undisturbed occupation surface, they have the potential of telling us about such things as food sharing and other aspects of past social organization.

Bone refitting of this second sort done by Enloe at Verberie shows that bones belonging to the same animal either did not travel very far from the areas in which they are concentrated (and at which initial butchering apparently occurred), or, if they did, traveled to, but not between, the hearths. This situation is quite different from that found at the roughly contemporaneous site of Pincevent, located not far from Verberie. Here, bones traveled from hearth to hearth, suggesting food sharing among the people using those hearths (Enloe, 2004). All this, along with a wealth of other evidence from the site, suggests that Verberie, unlike Pincevent, served as a briefly occupied hunting camp – a place from which hunting was conducted and to which the results of the hunt were brought for processing. Enloe was also able to use tooth eruption data to show that in all likelihood the Verberie reindeer had been killed during the Fall, and thus presumably during migration.

The work done at Verberie provides a remarkably detailed view of what happened at this particular place at about 12 500 years ago. Small groups of people came here to hunt reindeer during autumn. Hearths were constructed and stone tools fashioned or refashioned around those hearths; animals were hunted nearby, then brought back to be butchered, with the meat transported elsewhere.

Not all horizontal archaeology is as firmly grounded as that which has been conducted at Verberie and Pincevent. A good deal of it, in fact, is hardly compelling at all, consisting largely of poorly controlled assertions about the behavioral meaning of a particular set of faunal material. However, when horizontal zooarchaeology is well done, as at Verberie and Pincevent, the degree of detail it can provide about ancient human behavior can be close to astonishing.

Taphonomy

The differences between vertical and horizontal approaches to zooarchaeology are often in degree, not kind. Multiple horizontal analyses at a single stratified site can be combined to look at change through time, and many vertical analyses examine the distribution of specimens across space as well.

Both approaches require that we understand the nonhuman factors that may have impacted the faunal material that is under study. Carnivores, for instance, can introduce bones into sites occupied by people, and can modify both the condition and the location of bones deposited by people. Specimens can be destroyed by a roof-fall in a cave or by chemical action anywhere; they can be moved by water, trampled by large animals (including people), attacked by roots, and, in general, be affected by a depressingly broad variety of processes that can dramatically transform the assemblage that was originally deposited. Because of this, the area known as taphonomy, the study of the processes that intervene between the time an animal dies and scientists study what is left of it in the lab, has become extremely important in zooarchaeology (Lyman, 1994, 2008; Munoz and Mondini, 2008). Most zooarchaeologists are proficient at conducting taphonomic analyses. Without such analyses, there can be a high risk of interpreting as archaeologically meaningful patterns that have been produced in other ways.

Applied Zooarchaeology

As summarized earlier, the primary mission of zooarchaeology is to reconstruct and explain variation in past human societies and behavior from analyses of animal remains from archaeological sites. While tremendous insights into the human past have been gained from zooarchaeological research, knowledge germane to modern conservation biology and wildlife management has increasingly emerged from this work as well (Lauwerier and Plug, 2004; Wolverton and Lyman, 2012). These latter fields are often focused on understanding 'baseline' or 'benchmark' conditions for particular animal species, communities, or ecosystems that modern management efforts – policies and programs – are geared toward maintaining or restoring. 'Applied zooarchaeology' is thus the application of zooarchaeological data to these issues relevant to conservation.

Many applied zooarchaeology studies have provided information on the presence and abundance of particular animal species in regions where data on them are lacking or incomplete in historical records. Other studies forecast future faunal change, by showing how past climate changes impacted animal populations and comparing those with climatic changes – such as global warming – that are modeled to recur in the future.

One of the more high-profile cases of applied zooarchaeology involves the question of whether mountain goats are native to the Olympic National Park in Washington State (Lyman, 1995). The question has still not been resolved definitively, but detailed zooarchaeological research has clearly shown that the currently available faunal record from the Olympic Mountains is too meager to allow the detection of mountain goats even if they were present prehistorically (Lyman, 1995, 2008). More definitive examples include the documentation of Sandhill Crane breeding colonies in western Washington that were unknown to exist there from historical records (Bovy, 2012) and the finding that sea otters native to the Oregon coast prior to their eradication by nineteenth-century fur trade hunters belonged to the California subspecies rather than the Alaskan variety that had been the source of previously unsuccessful reintroductions (Valentine et al., 2008).

In perhaps the greatest success story of applied zooarchaeology, analysis of the Trappers Point archaeological fauna played a key role in the documentation of a 7000-year-old pronghorn migration route in western Wyoming. That analysis enhanced public awareness of pronghorn migrations that ultimately resulted in conservation easements from public and private landholders to help preserve the migration corridors. Most recently, over 10 million dollars in funding was provided by the Wyoming Department of Transportation to fund the construction of a series of fences, overpasses, and underpasses to allow for the safe passage of pronghorn herds across the highways that currently cross their ancestral migration paths (Sanders and Miller, 2004).

In short, the thriving subdiscipline of zooarchaeology provides us with information that can be acquired in no other way on past human diet, on human interactions with the environment, on those environments themselves, and on a surprising variety of past human behaviors that are themselves invisible but that leave faunal residues from which they can now at times be fairly confidently inferred. While this information is vital to understanding broad-scale patterns in past human behavior and evolution, it can also provide insights that are valuable to the conservation of animals and their environments today and in the future.

SUBJECT CLASSIFICATION INDEX

Anthropology

Advocacy in Anthropology
Affect and Emotion, Anthropology of
Africa, Sociocultural Overviews: West Africa
Age: Anthropological Aspects
Americas, Sociocultural Overviews: Central America
Americas, Sociocultural Overviews: Mexico
Americas, Sociocultural Overviews: North America, Native Americans
Americas, Sociocultural Overviews: Caribbean
Anarchism
Ancestors, Anthropology of
Anthropological Research, Ethics of
Anthropological Writing
Anthropology and History
Anthropology at Home
Anthropology: Overview
Apprenticeship, Anthropological Aspects
Arctic: Sociocultural Aspects
Art, Anthropological Aspects of
Asia, Sociocultural Aspects: China
Asia, Sociocultural Overviews: Korea
Asia, Sociocultural Overviews: South Asia
Australia, Sociocultural Overviews: Australian Settler Society
Australian Aboriginal Society and Culture: An Overview
Authenticity, Anthropology of
Belief, Anthropology of
Big Man, Anthropology of
Birth, Anthropology of
Body: Anthropological aspects
Borders, Anthropology of
Brokers and Brokerage, Anthropology of
Business Anthropology
Cannibalism
Cargo Cults
Carnival
Caste
Center-Periphery Relationships
Central Africa: Sociocultural Aspects
Central Asia, Anthropology of
Childhood: Anthropological Aspects
Citizenship, Anthropology of
Civilizations
Clan
Cognitive Anthropology
Collective Memory, Anthropology of
Colonialism, Anthropology of
Color Classification and Symbolism
Common Sense, Anthropology of
Communalism
Communes, Anthropology of
Community Studies: Anthropological
Comparative Method in Anthropology
Conflict: Anthropological Aspects
Cosmopolitanism
Craft Production, Anthropology of
Creolization: Sociocultural Aspects
Cultural Critique: Anthropological
Cultural Heritage
Cultural Relativism, Anthropology of
Culture Shock
Culture: Contemporary Views
Dance, Anthropology of
Death, Anthropology of
Development: Social-Anthropological Aspects
Diaspora
Diffusion: Anthropological Aspects
Discourse, Anthropology of
Drinking, Anthropology of
East Africa: Sociocultural Aspects
Economic Anthropology
Ecumene
Education: Anthropological Aspects
Elites, Anthropology of
Energy, Anthropology of
Ethnicity: Anthropological Aspects
Ethnocentrism
Ethnogenesis in anthropology
Ethnography
Ethnohistory
Ethnology
Europe: Sociocultural Overview
Everyday Life, Anthropology of
Exchange in Anthropology
Expertise, Anthropological Approaches to
Factionalism
Family: The Anthropology of the Concept and its History
Feminism in Anthropology
Fetishism
Fieldwork in Social and Cultural Anthropology
Finance, Anthropology of
Fishing Societies
Folklore
Food in Anthropology
Friendship, Anthropology of
Functionalism in Anthropology
Gender: Anthropological Aspects
Genealogy in Anthropology
Generation in Anthropology
Ghetto
Global South
Globalization, Anthropology of
Governmentality
Hazards and Disaster Research in Contemporary Anthropology
Health: Anthropological Aspects
Hegemony: Anthropological Aspects
Home, Anthropology of
Honor and Shame
Horticultural Societies
Households in Anthropology

Sacrifice
Science and Technology, Anthropology of
Secrecy, Anthropology of
Senses, Anthropology of the
Shamanism
Slavery: Comparative Aspects
Socialist Societies: Anthropological Aspects
Sociality In Anthropology
South America: Sociocultural Aspects
Southeast Asia: Sociocultural Aspects
Southern Africa: Sociocultural Aspects
Spirit Possession, Anthropology of
Sport, Anthropology of
State: Anthropological Aspects
Structuralism
Symbolism in Anthropology
Syncretism
Taboo
Third World
Time, Anthropology of
Totemism
Tourism
Tradition, Anthropology of
Tribe
Trickster Ethnography
Urban Anthropology
Values, Anthropology of
Violence in Anthropology
War: Anthropological Aspects, Historical Development of
Witchcraft
Work, Anthropology of
Worldview
Xenophobia and Nativism
Youth Culture, Anthropology of

Applied Social and Behavioral Sciences

Alcohol Interventions: Disease Model vs. Harm Reduction
Applied Criminology and Criminal Justice
Applied Demography
Applied Sociology
Case Studies
Cost-Benefit and Cost Effectiveness Analyses in Evaluation Research
Crime and Criminal Justice: Applied Research from Routine Monitoring to Evidence-Based Practices
Data Bases and Statistical Systems: Applied Social Research
Empowerment Evaluation
Ethnography in Applied Social Research
Evidence-Based Practice
Experimental Design: Randomization and Social Experiments
Field Experiments
Focus Groups
Forecasting
Gender and Women's Studies, applied research on
Homelessness in the United States
Immigration, Applied Research on
Implementation Science
Intimate Partner Abuse, Applied Research on
Logic Models
Mixed Methods
Needs Assessment
Participatory Action Research in Social Research
Policy Analysis
Prevention Research
Propensity Scoring
Qualitative Research
Quasi-Experimental Designs
Realism, in Applied Research
Social Experiments
Social Network Analysis
Societal Impact Assessment
Survival Analysis: Whether, and If So, When?
Systematic Reviewing and Meta-Analysis

Applied, Industrial, and Organizational Psychology

Climate, Justice, and Power

Affirmative Action, Sociology of
Affirmative Action: Comparative Policies and Controversies
Affirmative Action: Empirical Work on its Effectiveness
Corporate Culture
Gender and Women's Studies, applied research on
Negotiation and Conflict, The Psychology of
Organizational Climate in the Work Setting
Organizational Justice
Power, Politics, and Influence in Organizations
Subjective Wellbeing and Culture

Emotions, Cognition, and Personality

Agreeableness
Authoritarianism
Conscientiousness
Coping, Personality and
Core Self-Evaluations
Dark Triad: The "Dark Side" of Human Personality
Emotion in Cognition
Emotion, Perception and Expression of
Emotional Intelligence and Competencies
Emotional Regulation
Emotions and Work
Extraversion
Five Factor Model of Personality, Assessment of
Five Factor Model of Personality, Facets of
Five Factor Model of Personality, Universality of
Genetic Factors in Organizational Psychology
Managerial and Organizational Cognition
Neuroticism
Openness to Experience
Personality and Creativity
Personality and Economics
Personality and Values at Work
Personality Assessment, Faking and
Personality Assessment, Forced-Choice
Personality Assessment: Overview
Self-Efficacy
Self-Esteem
Stress: Psychological Perspectives
Subjective Wellbeing, Psychology of
Workplace Stress

Industrial-Organizational Psychology: General

Consumer Psychology
Cross-Cultural Training in Industrial and Organizational Psychology
Diversity in organizations
Indigenous Management Styles

Industrial–Organizational Psychology: Science and Practice
Peace Promotion, Psychology of
Program Evaluation
Technological Change and the Sociotechnical System, Applied Psychology of
Transportation, Psychology of
Volunteerism, Psychology of
Absorptive Capacity (of Organizations)
Administration in Organizations
Agency Theory
Behavioral Theories of Organization
Big Five Factor Model, Theory and Structure
Corporate Governance
Customer Satisfaction
Development: Organizational
Ethical Codes, Professional: Business Codes
Experimental Design: Randomization and Social Experiments
Family Business
Field Experiments
Greening of Business
Human Resource Management, Psychology of
Information and Knowledge, Organizational
Interorganizational Relationships and Networks
Job Design and Evaluation: Organizational Aspects
Learning: Organizational
Modern Management: Origins and Development
Myths and Symbols: Organizational
Narrative Approaches to Organizations
Network Analysis
Network Paradigm: Applications in Organizational Science
Organizational Behavior, Psychology of
Organizational Climate
Organizational Control
Organizational Decision Making
Organizational Errors: Catastrophic
People in Organizations
Qualitative Research
Quasi-Experimental Designs
Rational Choice and Organization Theory
Research and Development in Organizations
Social Business
Social Capital in Organizations
Social Innovation
Social Network Analysis
Strategic Management
Strategizing
Stress at Work
Structural Contingency Theory
Systematic Reviewing and Meta-Analysis
Wellbeing and Burnout in the Workplace, Psychology of
Wellbeing and Burnout in the Workplace: Organizational Causes and Consequences
Wisdom, Psychology of
Workplace Autonomy
Workplace Safety and Health
Realism, in Applied Research

Leadership and Teams
Authentic Leadership
Group Processes in Organizations
Leader–Member Exchange Theory
Leadership in Organizations, Sociology of
Supervision, Abusive
Teamwork and Team Performance Measurement

Performance and Satisfaction
Behavior Analysis, Applied
Cultural Intelligence and Competencies
Human Factors and Ergonomics
Innovation
Job Analysis and Work Roles, Psychology of
Job Satisfaction
Money and Finances, Psychology of
Organizational Citizenship Behavior
Organizational Commitment
Pay, Compensation and Performance, Psychology of
Pro-Environmental Behavior
Shadow Work: Measurement
Work Motivation
Workplace Deviance

Personnel and Careers
Aging and Work
Career Development: Multilevel Perspective
Performance Appraisal and Evaluation
Personnel Selection, Psychology of
Professions in Organizations
Promotions
Psychological Contracts
Unemployment: Structural
Wage Differential and Structure

Vocational Training
Vocational Training

Archaeology

Chiefdoms, Archaeology of
Civilizations
Conflict and War, Archaeology of: Behavior and Social Organization
Conflict and War, Archaeology of: Weapons and Artifacts
Cultural Heritage
Food Production, Origins of
Historical Archaeology
Household Archaeology
Human Language, Evolution of
Hunter–Gatherer Societies, Archaeology of
Intensification and Specialization, Archaeology of
Language Families, Archaeology and History of
Migrations, Colonizations, and Diasporas in Archaeology
Prehistoric Art
Religion: Evolution and Development
Religious Belief, Evolution of
Ritual and Symbolism, Archaeology of
Settlement and Landscape Archaeology
States and Civilizations, Archaeology of
Trade and Exchange, Archaeology of
Writing, Evolution of
Museums

Research Methods
Archaeometry
Bioarchaeology
Ceramics in Archaeology
Chronology, Stratigraphy, and Dating Methods in Archaeology
Cultural Resource Management: Conservation of Cultural Heritage
Environmental Archaeology
Ethnoarchaeology
Forensic Archaeology
Geoarchaeology
Geospatial Applications in Archaeology
Lithics and Archaeology
Paleoethnobotany
Survey and Excavation (Field Methods) in Archaeology
Zooarchaeology

Theoretical Perspectives
Archaeology and Cultural Memory
Archaeology, Politics of
Archaeology, Theory in
Archaeology: Philosophy and Science
Civilization, Concept and History of
Cognitive Archaeology
Cultural Evolution: Overview
Cultural Evolution: Theory and Models
Diffusion: Anthropological Aspects
Ethnic Identity and Ethnicity in Archaeology
Evolution, Natural and Social: Philosophical Aspects
Gender, Feminism, and Sexuality in Archaeological Studies
Marxist Archaeology
State Formation, Theory of
State, History of

World Regions
Ancient Egypt, Archaeology of
Ancient Greece and Rome, History of
Arctic Archaeology and Prehistory
Australia and New Guinea, Archaeology of
Classical Archaeology

Sustainable Agriculture

Behavioral Neuroscience

Alzheimer's Disease, Neural Basis of
Anxiety and Fear Conditioning, Neural Basis of
Attention, Neural Basis of
Attention-Deficit and Hyperactivity Disorders, Neural Basis of
Brain Damage: Neuropsychological Rehabilitation
Brain Development: Ontogenetic Neurobiology of
Brain Stimulation Reward
Brain: Response to Enrichment
Cerebral Cortex
Cognitive Development in Infancy, Neural Mechanisms of
Computational Neuroscience
Cortical Areas Engaged in Movement: Neuroimaging Methods
Cortical Development: Transplantation and Rewiring Studies
Dysexecutive Syndromes
Electroencephalography: Basic Principles and Applications
Emotion, Neural Basis of
Epigenetics of brain plasticity and behavior
Epilepsy
Eye Movement, Control of: Oculomotor control
Eyeblink Classical Conditioning
Fear Conditioning: Overview
Fear: Psychological and Neural Aspects
Fear-Potentiated Startle
Food Preferences, Psychology and Physiology of
Habituation
Hunger and Eating, Neural Basis of
Hypnosis, Neural Basis of
Hypothalamic-Pituitary-Adrenal Axis, Psychobiology of
Hypothalamus
Ion Channels and Molecular Events in Neuronal Activity
Kindling
Limbic System
Long-term Potentiation and Long-term Depression
Motor Cortex
Near-Infrared Spectroscopy
Neural Plasticity
Neural Representations of Direction (Head Direction Cells)
Neural Synchrony as a Binding Mechanism
Neuroendocrinology
Neurons and Dendrites, Integration of Information in
Neurotransmitters
Occipital Lobe (Visual Cortex): Functional Aspects
Olfactory System
Optogenetics
Parietal Lobe
Prefrontal Cortex
Prefrontal Cortex Development and Development of Cognitive Function
Premotor Cortex
Recovery of Function: Dependency on Age
Sleep: Neural Systems
Taste and Smell, Psychology of
Temporal Lobe
Topographic Maps
Vestibular System
Vestibulo-ocular Reflex, Adaptation of the
Visual Streams: Dorsal and Ventral
Williams Syndrome

SUBJECT INDEX

Notes

Cross-reference terms in *italics* are general cross-references, or refer to subentry terms within the main entry (the main entry is not repeated to save space). Readers are also advised to refer to the end of each article for additional cross-references - not all of these cross-references have been included in the index cross-references.

The index is arranged in set-out style with a maximum of three levels of subheading. Major discussion of a subject is indicated by bold page numbers. Page numbers suffixed by t and f refer to Tables and Figures respectively. *vs.* indicates a comparison.

The index entries are presented in word-by-word alphabetical sequence in which a group of letters followed by a space is filed before the same group of letters followed by a letter. For example, entries beginning 'air density' are alphabetized before 'aircraft.' Prefixes and terms in parentheses are excluded from the initial alphabetization.

Where index subentries and sub-subentries pertaining to a subject have the same page number, they have been listed to indicate the comprehensiveness of the text.

instructional psychology 12:202
Conceptual change theory 21:278
Conceptual conservatism, Feyerabend on 9:117–118
Conceptual continuum 14:242t
Conceptual development 21:276
Vygotsky on 25:313–314
Conceptual frameworks, of economic statistics 5:760–761
Conceptual history 4:548–554, 18:486
before and after Koselleck 4:549–550
concepts in history of ideas 4:550
critique, transformation, and resumption of encyclopedia of basic concepts 4:551–552
discourses 4:548, 4:550–553
French approach 4:550–551
historical epistemology 4:550–551
historical semantics 4:548–553
historiography 4:548
history of mentalities and philosophy of science 4:550–551
international trends 4:552–553
Koebner on 4:549–550
lexicon *Geschichtliche Grundbegriffe* 4:551
linguistic turn 4:548
Luhmann on 4:552
philosophy of language 4:548
Schmitt on 4:551
Conceptual interface 9:877
Conceptual knowledge 12:326
semantic memory 21:572–578
Conceptual learning, policy change 3:843
Conceptual metaphor theory
of cognitive semantics 13:933–934
of language 13:297–298
Conceptual models
for emotions 7:462–464
social networks 22:366–367
Conceptual preparation 23:256
Conceptual relativism 20:235–236
about science 20:236
Conceptual relativity, in internal realism 19:665–666
Conceptual representation 16:675
Conceptual scale 14:241
Conceptual space 17:555–556, 17:556t
Conceptual/etiological theory of an intervention 15:65
Conceptualism 13:772
legal reasoning 13:779–780
Conceptuality, cardiovascular reactivity 3:118
Conceptualization 11:285
of a continuum for proficiency 16:66
in critical realism 5:280
and models 15:282–283
of neoliberalism
as ideology 16:462–463
neoliberal governmentality 16:463–464
as policy 16:464
of organizational role 6:597–598
of target object
in survey questions 23:766
of technology 24:113–114
Conceptualizations of role 4:741–742
Conceptually oral text 14:241
Conceptually written text 14:241
Concerted cultivation 5:378, 22:327
Concessional loans 3:503
Chinese foreign aid 3:502–506
Conciliation 15:71–72, 17:621
appeasement 1:826–828, 1:830
Conclusion (*explanandum*) 10:773–774
Concomitant of the rth order statistic 17:294
Concomitants of order statistics 17:293–294
CONCOR (The CONvergence of iterated CORrelations) 3:910, 23:622–623
Concordance
testing, nonparametrics 16:880–881
in twin studies 24:688–692
Concordance ordering 14:450–451
Concrete and abstract instantiations, in mathematics learning 4:68–69
Concrete interaction patterns, social structure as 22:716–717
Concrete operational child 18:128–129
Concrete operational thought 7:883
Concrete self-evaluations, self-development 21:492
Concubine 17:488–489
Concurrency, in urban growth management 10:448
Concurrent degree (undergraduate) 24:52
Concurrent expert testimony 8:585–586
Concurrent processes 16:541, 16:543
Concurrent sexual partnerships 21:798
Concurrent validity 6:345
Condillac, Etienne Bonnet de 19:410
Condition humaine 11:371
Condition on Extraction Domains (CED) 16:5
Conditional adaptations 8:422
evolutionary developmental psychology 8:422–423, 8:426
Conditional additivity 4:877
Conditional approximated likelihood 14:121–122
example 14:122
Conditional Bayes risk function for classification 23:412
Conditional Bayes risk function for learning 23:414
Conditional cash transfer (CCT) 6:274, 8:562, 25:479
impact on marriage and fertility 4:555–559
adolescent girls 4:558
adult female 4:556–557
developing countries 4:555
education 4:557–559
empirical evidence 4:556–558
empowerment 4:555
health 4:555, 4:557–558
other forms of transfers 4:558
school-age children 4:557–558
social protection 4:559
theoretical foundations 4:555–556
Conditional cash transfer (CCT) programs 18:751, 22:285
Conditional fallacy 5:95
Conditional fees 12:922, 14:267
Conditional heteroscedasticity, time series models with 24:312–313
Conditional independence 10:341, 10:345–346, 14:323–324
model of 16:132
loglinear models 16:125, 16:127
Conditional inference, model selection 15:650
Conditional inference model 15:272–273
Conditional knowledge 24:90
Conditional likelihood 14:120–121
example 14:121
Conditional likelihood analyses, for crossover designs 5:353
Conditional logistic regression 2:592–593

Conditional maximum likelihood (CML) method 2:592–593
in outcome-based sampling 17:105
Conditional monopolies 14:622
Conditional positive assortative matching 2:106
Conditional probabilities 14:632–633, 19:25
Bayes' theorem 2:378–379
Dutch Book theorem for 19:39
infant and child survival 16:52, 16:54–55
in outcome-based sampling 17:104
Conditional profile likelihood 14:121–122
Conditional reasoning 14:307–311
Conditional reference prior 14:122–124
Conditionalities
of norms 17:5, 17:7
Conditionals 5:95–96
counterpossible 5:96
probabilities of 5:96–97
subjunctive 5:97
Conditioned aversion 3:767
Conditioned emotional responses, and anxiety 1:808
Conditioned inhibition 3:765, 18:41–42
Conditioned reflex techniques 17:609–610
Conditioned reflexes 17:608–609, 20:211
Watson on 25:449
Conditioned response (CR) 3:764–766, 3:768, 8:849
Conditioned stimulus (CS) 3:765, 8:849, 15:156, 17:608–609
and fear 8:870
input circuitry
eyeblink conditioning 8:637–638
pathways, cerebellar feedback to 8:638–639
Conditioning 13:691, 13:693, 18:40–42
avoidance 13:692
behavior therapy 2:426
classical 1:374
fear-potentiated startle 8:860–864
operant 1:374
Pavlovian 13:692
Conditioning factors, and general strain theory 23:496–497
Conditioning therapy 2:408
Conditions, addiction 1:98
Condoms 21:793, 21:800
use, in Latin America and Caribbean 9:70–71
Condorcet, Marquis de 8:292, 18:917
Condorcet's jury theorem 11:889
Conduct
and anomie 1:720
and national character 16:233
regulation *see* Regulation of conduct
of research 20:510–512
Conduct disorder (CD) 2:470, 6:7, 6:13, 19:451–452, 23:557–560

brief measures 9:231–232
Big Five Inventory – 10-Item Version 9:232
Big Five Inventory – 44-Item Version 9:232
Ten-Item Personality Inventory 9:232
circular characteristics 2:563
comparative validity of personality inventories 9:234
conscientiousness 2:559, 2:561, 17:787–788, 17:802
Costa and McCrae works on 9:231
cross-cultural findings 2:562–563
dimensional characteristics 2:563
and educational outcomes 17:787–789
emotional stability 2:559, 2:561, 17:787
extraversion 2:559, 2:561, 17:787, 17:802
on facets 9:236–237
on factors 9:236–237
future directions 2:564
Goldberg on 9:230–231
hierarchical characteristics 2:563
important facets
how many? 9:237–238
what facets? 9:237–238
individual differences 9:233
intellect/openness to experience 2:559–561
lexical approach 9:230–231
lexical hypothesis 2:559–560
and lower-level constructs 2:561
measures derived from International Personality Item Pool 9:233
NEO Personality Inventory, revised (NEO-PI-R) 9:231–234
neuroticism 17:802
nomological network 2:563–564
openness 17:787–788
openness to experience 17:802
paradigm 2:559
for personality disorder 9:242–248
absence of normal traits 9:246
advantages 9:244–246
diagnosis 9:244
dimensional trait model 9:242, 9:244–247
DSM-5 9:246–247
homogeneous trait constructs 9:245
improved construct validity 9:246
inclusion of normal, adaptive traits 9:245–246
individualized and precise description 9:245
limited number of traits 9:247
limited recognition of bipolarity of maladaptive personality structure 9:246–247
personality facets 9:238–239
heritability 9:238
personality development 9:238–239
self-observer agreement 9:238
personality psychology 2:559
of personality traits 17:922–923
practical usefulness 2:563–564
prediction of outcome criteria 9:239–240
contribution to behavior understanding 9:240
correspondence in 9:240
facets beyond five factor model 9:240
predictive validity of facets 9:239–240
specific variance in facets 9:239
psycholexical approach 2:562
questionnaire tradition 9:231
shared model of personality 2:560
structured interview 9:233–234
taxonomy 2:559
universality of 9:249–253
country profiles 9:250, 9:252
cross-cultural psychology 9:249
emic–etic approach 9:251–252
indigenous psychology 9:251–252
psycholexical studies 9:250–251

Five-factor model (FFM) of personality (*continued*)
questionnaire studies 9:250

Fixations (vision) 3:344, 8:633
Fixed action pattern (FAP)
of emotional expression 7:458
Lorenz on 14:367
Fixed and random effects 19:734
Fixed capital 3:90
Fixed coefficients 16:49, 16:53
estimates of 16:50t
Fixed costs 14:550, 14:552–553
Fixed density function on processing time 12:79
Fixed effects 19:727
statistical procedures
meta-analysis 15:273
Fixed effects models 14:164, 23:204, 23:382
for class size 3:753
for divorce 14:518–519
hierarchy models 10:836–840
linear mixed models 14:162, 14:164, 14:166–167, 14:167t
Fixed fee schedules 13:630
Fixed internal sampling 23:188f
Fixed level testing, for significance 21:960
Fixed motor pattern 14:367
Fixed role therapy 4:730
Fixed unit effects model, for crossover designs 5:353
Fixed-dose drug combinations (FDCs), for AIDS 1:492
Fixed-effects estimates 16:49–50
of demographic variable impacts 24:705–708
Fixed-group measures of tolerance 18:491–494
Fixed-marginal models 19:431–432
Fixed-point account, of mutual beliefs 21:877–878
Fixed-price-ratio bimetallism 14:624
Fixed-term contracts 1:27–28
